

# **SAW FILTER**

Part Number: VTF31505

The **VTF31505** is a low-loss, compact, and economical surface-acoustic-wave (**SAW**) filter in a surface-mount ceramic **QCC8C** case designed to provide front-end selectivity in **315.000** MHz receivers. Receiver designs using this filter include superhet with 10.7 MHz or 500 kHz IF, direct conversion and superregen.

# 1. Package Dimension (QCC8C)

| Pin  | Configuration  |  |  |
|------|----------------|--|--|
| 1    | Input          |  |  |
| 2    | Input Ground   |  |  |
| 5    | Output         |  |  |
| 6    | Output Ground  |  |  |
| 3, 7 | To be Grounded |  |  |
| 4, 8 | Case Ground    |  |  |

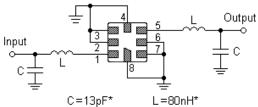

| Sign | Data (unit: mm) | Sign | Data (unit: mm) |  |  |
|------|-----------------|------|-----------------|--|--|
| Α    | 2.08            | Е    | 1.20            |  |  |
| В    | 0.60            | F    | 1.35            |  |  |
| С    | 1.27            | G    | 5.00            |  |  |
| D    | 2.54            | Н    | 5.00            |  |  |

#### 5. Performance

### 5-1.Maximum Rating

| Rating                      | Value          | Unit       |            |
|-----------------------------|----------------|------------|------------|
| Input Power Level           | $P_{in}$       | 10         | dBm        |
| DC Voltage                  | $V_{ m DC}$    | 12         | V          |
| Storage Temperature Range   | $T_{ m stg}$   | -40 to +85 | $^{\circ}$ |
| Operating Temperature Range | T <sub>A</sub> | -10 to +60 | $^{\circ}$ |

### 5-2. Electronic Characteristics

| Characteristic   |                                    | Minimum          | Typical | Maximum | Unit |               |
|--|------------------------------------|------------------|---------|---------|------|---------------|
| Center Frequency (center frequency between 3dB points) |                                    | $f_{\mathbb{C}}$ |         | 315.000 |      | MHz           |
| Insertion Loss   |                                    | IL               |         | 3.0     | 5.0  | dB            |
| 3dB Pass band  |                                    | $BW_3$           |         | 600     |      | kHz           |
| Rejection  | at f <sub>C</sub> -21.4MHz (Image) |                  | 40      | 50      |      | dB            |
|  | at f <sub>C</sub> -10.7MHz (LO)    |                  | 20      | 30      |      |               |
|  | Ultimate                           |                  |         | 60      |      |               |
| Temperature  | Turnover Temperature               | To               | 25      |         | 55   | ${\mathbb C}$ |
|  | Turnover Frequency                 | f <sub>O</sub>   |         | $f_{C}$ |      | MHz           |
|  | Frequency Temperature Coefficient  | FTC              |         | 0.032   |      | ppm/℃²        |
| Frequency Aging Absolute Value during the First Year   |                                    | fA               |         | 10      |      | ppm/yr        |

### (i) CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

- 1. The frequency f<sub>C</sub> is defined as the midpoint between the 3dB frequencies.
- 2. Unless noted otherwise, all measurements are made with the filter installed in the specified test fixture that is connected to a 50Ω test system with VSWR≤1.2:1. The test fixture L and C are adjusted for minimum insertion loss at the filter center frequency, f<sub>C</sub>. Note that insertion loss, bandwidth, and passband shape are dependent on the impedance matching component values and quality.
- 3. Unless noted otherwise, specifications apply over the entire specified operating temperature range.
- Frequency aging is the change in f<sub>C</sub> with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- 5. Turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_c$ , may be calculated from:  $f = f_0 [1 FTC (T_0 T_c)^2]$ .
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- 7. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.
- 8. Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 9. For questions on technology, prices and delivery, please contact our sales offices or e-mail info@v-torch.com
