

# **SAW FILTER**

Part Number: VTF303M

The **VTF303M** is a low-loss, compact, and economical surface-acoustic-wave (**SAW**) filter in a low-profile metal **TO-39** case designed to provide front-end selectivity in **303.825** MHz receivers. Receiver designs using this filter include superhet with 10.7 MHz or 500 kHz IF, direct conversion and superregen.

## 1. Package Dimension (TO-39)

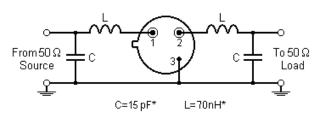

| Pin | Configuration  |  |  |  |  |
|-----|----------------|--|--|--|--|
| 1   | Input / Output |  |  |  |  |
| 2   | Output / Input |  |  |  |  |
| 3   | Case Ground    |  |  |  |  |

| Dimension | Data (unit: mm) |  |  |  |  |
|-----------|-----------------|--|--|--|--|
| Α         | 9.15±0.20       |  |  |  |  |
| В         | 5.08±0.20       |  |  |  |  |
| С         | 3.30±0.20       |  |  |  |  |
| D         | 3±0.20 / 5±0.20 |  |  |  |  |
| Е         | 0.45±0.10       |  |  |  |  |

#### 2. Marking

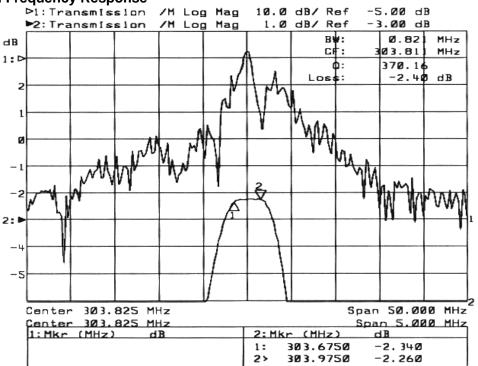

# **VTF 303M**

### 3. Test Circuit

Color: Black or Blue

### 4. Typical Frequency Response

#### 5. Performance

#### 5-1.Maximum Rating

| Rating                          | Value          | Unit       |            |
|---------------------------------|----------------|------------|------------|
| CW RF Power Dissipation         | Р              | +10        | dBm        |
| DC Voltage Between Any Two Pins | $V_{ m DC}$    | ±30        | V          |
| Storage Temperature Range       | $T_{ m stg}$   | -40 to +85 | $^{\circ}$ |
| Operating Temperature Range     | T <sub>A</sub> | -10 to +60 | $^{\circ}$ |

#### 5-2. Electronic Characteristics

| Characteristic   |                                    | Minimum         | Typical | Maximum        | Unit |              |
|--|------------------------------------|-----------------|---------|----------------|------|--------------|
| Center Frequency (center frequency between 3dB points) |                                    | f <sub>C</sub>  |         | 303.825        |      | MHz          |
| Insertion Loss   |                                    | IL              |         | 3.0            | 4.5  | dB           |
| 3dB Bandwidth  |                                    | BW <sub>3</sub> |         | 600            | 800  | kHz          |
| Rejection  | at f <sub>C</sub> -21.4MHz (Image) |                 | 40      | 50             |      | dB           |
|  | at f <sub>C</sub> -10.7MHz (LO)    |                 | 20      | 30             |      |              |
|  | Ultimate                           |                 |         | 60             |      |              |
| Temperature  | Turnover Temperature               | To              | 25      |                | 55   | $^{\circ}$ C |
|  | Turnover Frequency                 | f <sub>O</sub>  |         | f <sub>C</sub> |      | MHz          |
|  | Frequency Temperature Coefficient  | FTC             |         | 0.032          |      | ppm/°C²      |
| Frequency Aging Absolute Value during the First Year   |                                    | fA              |         | 10             |      | ppm/yr       |

## **(i)** CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

- 1. The frequency  $f_{\text{\scriptsize C}}$  is defined as the midpoint between the 3dB frequencies.
- 2. Unless noted otherwise, all measurements are made with the filter installed in the specified test fixture that is connected to a 50Ω test system with VSWR≤1.2:1. The test fixture L and C are adjusted for minimum insertion loss at the filter center frequency, f<sub>C</sub>. Note that insertion loss, bandwidth, and passband shape are dependent on the impedance matching component values and quality.
- 3. Unless noted otherwise, specifications apply over the entire specified operating temperature range.
- 4. Frequency aging is the change in f<sub>C</sub> with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- 5. Turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_C$ , may be calculated from:  $f = f_0 [1 FTC (T_0 T_C)^2]$ .
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- 7. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.
- 8. Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 9. For questions on technology, prices and delivery, please contact our sales offices or e-mail info@v-torch.com
