

# SAW RESONATOR Part Number: VTR915M

The **VTR915M** is a true one-port, surface-acoustic-wave (**SAW**) resonator in a low-profile metal **TO-39** case. It provides reliable, fundamental-mode, quartz frequency stabilization i.e. in transmitters or local oscillators operating at **915.000** MHz.

#### 1. Package Dimension (TO-39)

| Pin | Configuration  |  |  |
|-----|----------------|--|--|
| 1   | Input / Output |  |  |
| 2   | Output / Input |  |  |
| 3   | Case Ground    |  |  |

| Dimension | Data (unit: mm) |  |  |  |
|-----------|-----------------|--|--|--|
| А         | 9.15±0.20       |  |  |  |
| В         | 5.08±0.20       |  |  |  |
| С         | 3.30±0.20       |  |  |  |
| D         | 3±0.20/5±0.20   |  |  |  |
| E         | 0.45±0.10       |  |  |  |

### 2. Marking

# VTR

915M

Ink Marking Color: Black or Blue

# 4. Typical Application Circuits

1) Low-Power Transmitter Application

# 5. Typical Frequency Response

2) Local Oscillator Application

#### 6. Temperature Characteristics

Elocation to Entrated

The curve shown above accounts for resonator contribution only and does not include oscillator temperature characteristics.

#### 7. Performance

7-1.Maximum Ratings

| Rating                          | Value            | Unit       |     |
|---------------------------------|------------------|------------|-----|
| CW RF Power Dissipation         | Ρ                | 0          | dBm |
| DC Voltage Between Any two Pins | V <sub>DC</sub>  | ±30        | V   |
| Storage Temperature Range       | T <sub>stg</sub> | -40 to +85 | °C  |
| Operating Temperature Range     | T <sub>A</sub>   | -10 to +60 | °C  |

#### 7-2. Electronic Characteristics

|  | Characteristic                    | Sym            | Minimum | Typical        | Maximum | Unit   |
|--|-----------------------------------|----------------|---------|----------------|---------|--------|
| Center Frequency<br>(+25℃)                           | Absolute Frequency                | f <sub>C</sub> | 914.850 |                | 915.150 | MHz    |
|  | Tolerance from 915.000 MHz        | $\Delta f_{C}$ |         | ±150           |         | kHz    |
| Insertion Loss                                       |                                   | IL             |         | 1.6            | 2.2     | dB     |
| Quality Factor                                       | Unloaded Q                        | Q <sub>U</sub> |         | 9,000          |         |        |
|  | 50 $\Omega$ Loaded Q              | QL             |         | 1,500          |         |        |
| Temperature<br>Stability                             | Turnover Temperature              | T <sub>0</sub> | 25      |                | 55      | °C     |
|  | Turnover Frequency                | f <sub>0</sub> |         | f <sub>C</sub> |         | kHz    |
|  | Frequency Temperature Coefficient | FTC            |         | 0.032          |         | ppm/℃² |
| Frequency Aging Absolute Value during the First Year |                                   | f <sub>A</sub> |         | ≤10            |         | ppm/yr |
| DC Insulation Resistance Between Any Two Pins        |                                   |                | 1.0     |                |         | MΩ     |
| RF Equivalent<br>RLC Model                           | Motional Resistance               | R <sub>M</sub> |         | 20             | 29      | Ω      |
|  | Motional Inductance               | L <sub>M</sub> |         | 31.3250        |         | μH     |
|  | Motional Capacitance              | См             |         | 0.9668         |         | fF     |
|  | Pin 1 to Pin 2 Static Capacitance | C <sub>0</sub> | 1.7     | 2.0            | 2.3     | pF     |

## **(i)**CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

- 1. The center frequency,  $f_{C}$ , is measured at the minimum IL point with the resonator in the 50 $\Omega$  test system.
- 2. Unless noted otherwise, case temperature  $T_C = +25^{\circ}C \pm 2^{\circ}C$ .
- 3. Frequency aging is the change in  $f_c$  with time and is specified at +65°C or less. Aging may exceed the

specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture,

Electronics Limited

decreasing in subsequent years.

- 4. Turnover temperature, T<sub>0</sub>, is the temperature of maximum (or turnover) frequency, f<sub>0</sub>. The nominal frequency at any case temperature, T<sub>c</sub>, may be calculated from:  $f = f_0 [1 FTC (T_0 T_c)^2]$ .
- 5. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C<sub>0</sub> is the measured static (nonmotional) capacitance between Pin1 and Pin2. The measurement includes case parasitic capacitance.
- 6. Derived mathematically from one or more of the following directly measured parameters:  $f_c$ , IL, 3 dB bandwidth,  $f_c$  versus  $T_c$ , and  $C_0$ .
- 7. The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- 8. Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- 9. Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 10. For questions on technology, prices and delivery, please contact our sales offices or e-mail info@v-torch.com
