

# **SAW RESONATOR**

Part Number: VTR98004

The VTR98004 is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount ceramic QCC4A case. It provides reliable, fundamental-mode, quartz frequency stabilization i.e. in transmitters or local oscillators operating at 980.000 MHz.

#### 1. Package Dimension (QCC4A)

| Pin | Configuration  |  |  |  |
|-----|----------------|--|--|--|
| 1   | Input / Output |  |  |  |
| 3   | Output / Input |  |  |  |
| 2/4 | Case Ground    |  |  |  |

| Sign | Data (unit: mm) | Sign Data (unit: mm) |     |
|------|-----------------|----------------------|-----|
| Α    | 1.2             | D                    | 1.4 |
| В    | 0.8             | Е                    | 5.0 |
| С    | 0.5             | F                    | 3.5 |

### 2. Marking

# VTR 98004

Laser Marking

### 3. Equivalent LC Model and Test Circuit

#### 4. Typical Application Circuits

#### 1) Low-Power Transmitter Application

#### 2) Local Oscillator Application

#### 5. Typical Frequency Response

#### 6. Temperature Characteristics

The curve shown above accounts for resonator contribution only and does not include oscillator temperature characteristics.

#### 7. Performance

#### 7-1. Maximum Ratings

| Rating                       |                     | Value      | Unit       |
|------------------------------|---------------------|------------|------------|
| CW RF Power Dissipation      | P                   | 0          | dBm        |
| DC Voltage Between Terminals | $V_{ m DC}$         | ±30        | V          |
| Storage Temperature Range    | $\mathcal{T}_{stg}$ | -40 to +85 | $^{\circ}$ |
| Operating Temperature Range  | T <sub>A</sub>      | -10 to +60 | $^{\circ}$ |

### 7-2. Electronic Characteristics

|  | Characteristic                    | Sym            | Minimum | Typical        | Maximum | Unit       |
|--|-----------------------------------|----------------|---------|----------------|---------|------------|
| Center Frequency<br>(+25°C)                          | Absolute Frequency                | f <sub>C</sub> | 979.850 |                | 980.150 | MHz        |
|  | Tolerance from 980.000 MHz        | $\Delta f_{C}$ |         | ±150           |         | kHz        |
| Insertion Loss                                       |                                   | IL             |         | 1.5            | 2.2     | dB         |
| Quality Factor                                       | Unloaded Q                        | Q <sub>U</sub> |         | 10,020         |         |            |
|  | 50 Ω Loaded Q                     | $Q_L$          |         | 1,600          |         |            |
| Temperature<br>Stability                             | Turnover Temperature              | T <sub>0</sub> | 25      |                | 55      | $^{\circ}$ |
|  | Turnover Frequency                | f <sub>0</sub> |         | f <sub>C</sub> |         | kHz        |
|  | Frequency Temperature Coefficient | FTC            |         | 0.032          |         | ppm/°C²    |
| Frequency Aging Absolute Value during the First Year |                                   | fA             |         | ≤10            |         | ppm/yr     |
| DC Insulation Resistance Between Any Two Terminals   |                                   |                | 1.0     |                |         | MΩ         |
| RF Equivalent<br>RLC Model                           | Motional Resistance               | R <sub>M</sub> |         | 19             | 29      | Ω          |
|  | Motional Inductance               | L <sub>M</sub> |         | 30.9372        |         | μН         |
|  | Motional Capacitance              | См             |         | 0.8534         |         | fF         |
|  | Shunt Static Capacitance          | C <sub>0</sub> | 2.05    | 2.35           | 2.65    | pF         |

## (i) CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

1. The center frequency,  $f_C$ , is measured at the minimum IL point with the resonator in the  $50\Omega$  test system.

www.v-torch.com Tel: 86-755-8363 5090 Fax: 86-755-8950 7007 Page 2 of 3

- 2. Unless noted otherwise, case temperature  $T_C = +25^{\circ}C \pm 2^{\circ}C$ .
- Frequency aging is the change in f<sub>C</sub> with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- Turnover temperature, T<sub>0</sub>, is the temperature of maximum (or turnover) frequency, f<sub>0</sub>. The nominal frequency at any case temperature,  $T_C$ , may be calculated from:  $f = f_0 [1 - FTC (T_0 - T_C)^2]$ .
- This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C<sub>0</sub> is the measured static (nonmotional) capacitance between the two terminals. The measurement includes case parasitic capacitance.
- Derived mathematically from one or more of the following directly measured parameters: f<sub>C</sub>, IL, 3 dB bandwidth,  $f_{\text{C}}$  versus  $T_{\text{C}}$ , and  $C_{0}$ .

  The specifications of this device are based on the test circuit shown above and subject to change or
- obsolescence without notice.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 10. For questions on technology, prices and delivery, please contact our sales offices or e-mail info@v-torch.com
